

## IMPORTANT ADVICES

You just bought an Ozonex regulation.

We thank you for trusting us and we will involve all our energy to keep your trust.

### WHAT DO YOU STILL HAVE TO DO?

This regulation is very precise, however this does not exclude a periodic checking of the measures shown on the box.

Those measures are done by sensors (probes or measurement electrodes) who will necessarily get wore, clogged and eventually deteriorated.

Please notice a period of:

2 or 3 years of functioning for probes (a letter will remind it to you).

1 or 2 months for a settings veracity checking with a colorimeter.

A reversal of bleach and acid tubes on injection cannulas is mandatory to avoid bleach cannula to be blocked. Think of it every 2 months.

Check your trays level. Fill it before the end to avoid pump defusing.

### CAUTION

FILLING TRAYS IS THE OPERATION WHO REQUIRES MORE CONCENTRATION. IN FACT, PRODUCTS REVERSAL IS VERY DANGEROUS. BE SURE OF THE PRODUCT YOU WILL THROW AS OF THE PRODUCT ALREADY IN THE TRAY. IT MUST BE IDENTICAL.

Only use products recommended by Ozonex.

In case of doubt, do not hesitate to contact us, an advisor will inform you. To realize a chlorine shock treatment, use 1,5 litre of pure bleach (sodium hypochlorite) for 10m<sup>3</sup>.

**Example:** a 70m<sup>3</sup> swimming pool will need 10 litre of pure bleach.

NEVER USE A PRODUCT CONTAINING HYDROGEN PEROXIDE. THIS PRODUCT IS INCOMPATIBLE WITH BLEACH (CHLORINE).

(BAQUATOP, REVA TOP, FLASH...)

ALL THOSE ADVICES ARE EXPLAINED IN THE NOTICE WE DELIVERED.
